Confirmit Genius

Mining for Truths

The deepest insights often lie hidden in unstructured, free-form content stored within open-ended survey responses, internal business systems, and scattered across the Internet.

Unfortunately, with ever-increasing volumes of this free-form content, such as survey verbatims, call center records, CRM data, and social media posts, finding deeper insights is like panning for gold — there are little nuggets of insight hidden amongst a vast amount of less valuable content.

What is Confirmit Genius?

Confirmit Genius is an advanced Text Analytics platform that uses the latest Machine Learning technologies to help you draw meaning from unstructured content. It is tightly integrated with Confirmit Horizons, our comprehensive, multi-channel Voice of the Customer (VoC), Voice of the Employee (VoE), and Market Research platform. Together Confirmit Horizons and Confirmit Genius enable you to easily combine structured data from surveys with the depth of insight and unprecedented level of detail available in open-ended feedback providing insight into the ‘why’ behind the customer/consumers’ survey responses.

Confirmit Genius consists of three main modules. These are:

00 Confirmit Genius Text Analytics

01 Confirmit Model Builder

02 Confirmit Concept Miner

In an Amazon review test, the sentiment analysis technology achieved nearly 90% accuracy.

01

Confirmit Genius Text Analytics helps you easily draw meaning and deep insights from unstructured text found in survey verbatims, call center notes, chatbot records, emails, and more. Even social media data can be imported for analysis, providing businesses with unparalleled insights into their customers' opinions as well as the company's online reputation, informing important business decisions.

Genius Text Analytics categorizes unstructured text and provides sentiment by category in order to:

- Ensure all customer comments are analyzed for actionable insights
- Drive up customer satisfaction and revenues
- Drive internal engagement through visibility into compelling insights
- Improve respondent experience with shorter surveys
- Achieve rapid ROI through fast deployment of a fully integrated solution.

02

Confirmit Model Builder allows you to explore your data and create hierarchical categorization models so that you can keep track of the key issues that impact your business. This optional end user tool for Text Analytics allows you to create and maintain your own categorization model, to ensure you're keeping on top of how your customers are really feeling, through their open ended comments. Model Builder speeds up the process of building and maintaining your models, such as model versioning, easy identification of uncategorized comments, and powerful topic discovery.

03

Confirmit Concept Miner uses the latest AI techniques to facilitate new topic discovery and extraction from your text data. Concept Miner is a component of Model Builder that removes all the guess work involved in building and maintaining your text analytics models. It makes it easy for users to quickly identify and understand key topics and insights that may otherwise have been hidden within your text data. Concept Miner surfaces all potential topics in your text, and you choose which ones should become tags that are available in Model Builder. You can then use them in Model Builder for even quicker creation of your categorization model.

How Can Confirmit Genius Help My Business?

With Confirmit Genius you can gain deeper insight into customer, employee, and market opinions across different categories of your business. Then, analyze the true sentiment across multiple sources, receive timely alerts about sentiment changes and align that insight with customer satisfaction scores.

You can enrich your Text Analytics insights by mapping it to other data sources about your customers, employees and the market – and benchmark against your competitors. Most importantly, you can quickly identify the cause of any significant shifts in your satisfaction or recommend metrics, and take action to resolve the situation before it impacts your bottom line. In short, Confirmit Genius helps you:

Quickly develop and maintain your own categorization models

Maximize the insight gained from customer feedback and market research

Apply a consistent category model for meaningful analysis across all communication channels

Monitor customer and public opinions of your brand and its public reputation

Rapidly analyze vast amounts of content to enable faster response to identified issues

Drive action to improve your customer experience and competitive standing.

Understand how your customers and the market really feel about your business

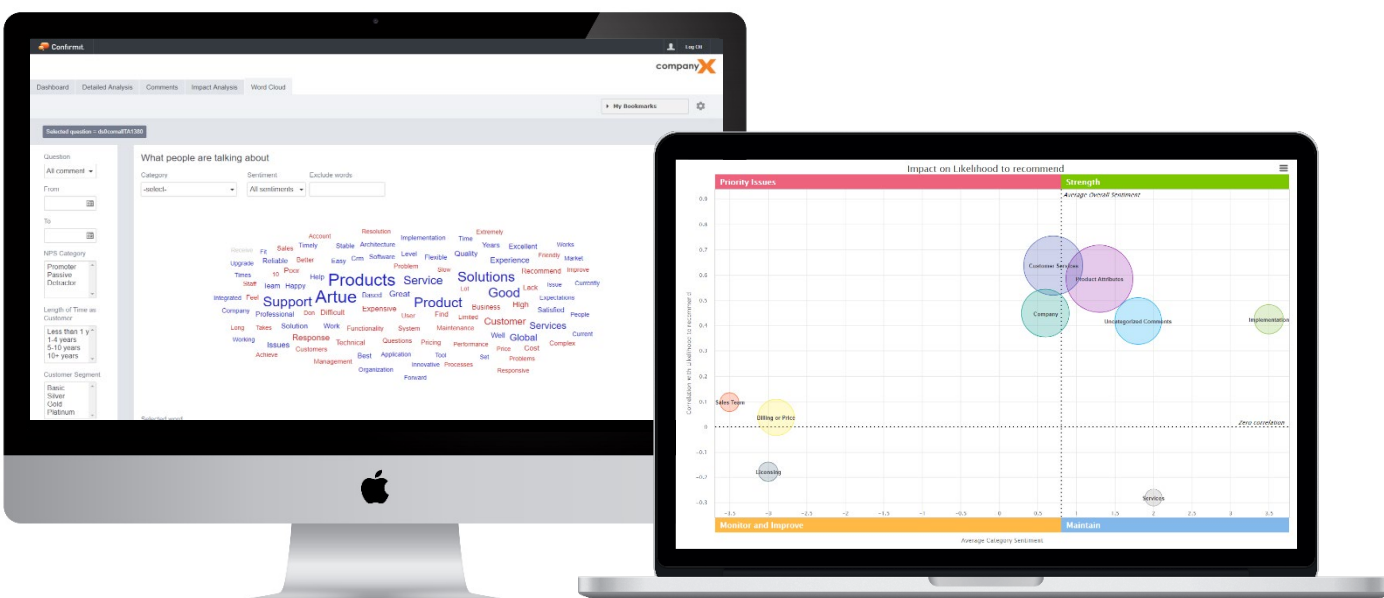

HANDLING COMPLEX COMMENTS

Confirmit Genius can handle multi-part verbatims and categorize them accurately. For example:

Room 
Restaurant 
Service 

“My **hotel room** was **wonderful** but we were very **disappointed with the restaurant**, it was slow and the **food wasn't as good** as we'd expected. The **concierge** was **helpful**, though, and recommended plenty of great restaurants nearby.”

How Can I Get the Most Out of Confirmit Genius Text Analytics?

While open-ended survey questions can help you collect deeper insights while asking fewer survey questions, getting respondents to provide meaningful detail in their open-ended responses can be a challenge.

Confirmit's Dynamic Open Text question type is an excellent solution to this problem. Dynamic Open Text questions encourage respondents to provide deeper detail and more meaningful open text responses in two ways. First, each open text field is coupled with a colour-coded gauge or status bar measuring the quantity of the feedback and encouraging respondents to provide more detailed responses. Secondly, this question type encourages respondents to provide higher quality responses by automatically identifying important keywords and phrases and asking the respondent to provide additional detail on those topics.

The best part is that this question type is highly configurable, making it easy for you to tailor things like text box sizes, status bar colours, keyword prompts, and the feedback provided to the respondent to suit your unique needs. [Click on here to watch a brief demo of Dynamic Open Text question types.](#)
